

Ved Project Setup Report

1. Storage Consumption

This entire setup is extremely lightweight to preserve your disk space. Here is the exact breakdown of the storage used on your **D: Drive**:

- **AI Models:** ~2.2 GB (1.9 GB for the main chat brain + 0.3 GB for the document reading brain)
- **Web Interface & Python Environment:** ~1.5 GB
- **Total Storage Used:** ~3.7 GB

You have nearly 90 GB free on your D: drive, meaning Ved is currently using less than 5% of your available space!

2. Is Qwen the ONLY agent?

No! You have access to thousands of models. I set qwen2.5:3b as your default starting agent because it is currently the absolute smartest model in the world that will fit inside your 8GB of RAM without crashing your computer.

However, your system is connected to the entire Ollama open-source library. You can add new "agents" or brains at any time by simply typing a command into the chat window.

Other great models you can download right now for your 8GB RAM PC:

- To get Microsoft's best math/logic model, type this in the chat: `/pull phi4-mini`
- To get Meta's (Facebook's) newest writing model, type: `/pull llama3.2:3b`
- To get Google's latest compact model, type: `/pull gemma2:2b`

Once downloaded, you can switch between them instantly using the drop-down menu at the top of the Ved interface.

3. Scaling Roadmap

Right now, you are bottlenecked by 8GB of RAM and no dedicated GPU.

- **Step 1 (More RAM):** Upgrading your laptop to 16GB or 32GB of RAM will allow you to run 7B and 8B parameter models (like Meta's flagship llama3.1:8b). These are significantly smarter.
- **Step 2 (Dedicated GPU):** Upgrading to a PC with an NVIDIA Graphics Card (like an RTX 3060 or 4070) will unlock massive 14B+ parameter models and generate text at blazing fast speeds (50+ words per second).

4. Network Access

Ved is configured to be accessible on your local network. Find your laptop's IP address in the startup terminal (e.g., 192.168.1.X) and enter `http://192.168.1.X:8080` into your phone's browser to chat with Ved from your phone while on the same Wi-Fi network.
